# Technical Notes

## IBM Clinical Development Maintenance

Date: 17 May 2019

### OVERVIEW

**Purpose:**

This document provides an overview of the changes to IBM Clinical Development during the Maintenance period on 17 May 2019.

**Background:**

IBM Clinical Development (formerly Merge eClinicalOS) is a Software as a Service (SaaS) application available for clients to design, deploy, and manage their clinical trials. It provides design tools for each aspect of the design and management process and provides an EDC interface for end-user data collection. It also provides additional tools such as ePRO access, Randomization, Dispense/Shipping Management, Endpoint Adjudication, Medical Coding, and Laboratory Normal collection to help manage different aspects of the trial.

**Documentation:**

User manuals for all features in the system are available online within IBM Clinical Development by clicking Online Help from the landing page or User Manuals from the help links in the header.

### CHANGES PERFORMED DURING MAINTENANCE

IBM Clinical Development uses software to manage file storage for the system, including user manuals and training materials. The stored files are then presented through IBM Clinical Development to users. During previous maintenance periods, the files will be transferred. With the 17 May 2019 maintenance, the data center routing of the stored files is being updated. This is a continuation of the changes to support a cloud-based environment and create architecture more suitable for growing IBM Clinical Development.

There are no changes to the core product or its functionality. The change is to back-end support only.
